

2019 APCORE Convention and International
Conference

THE UNIVERSITIES AND INDUSTRY 4.0

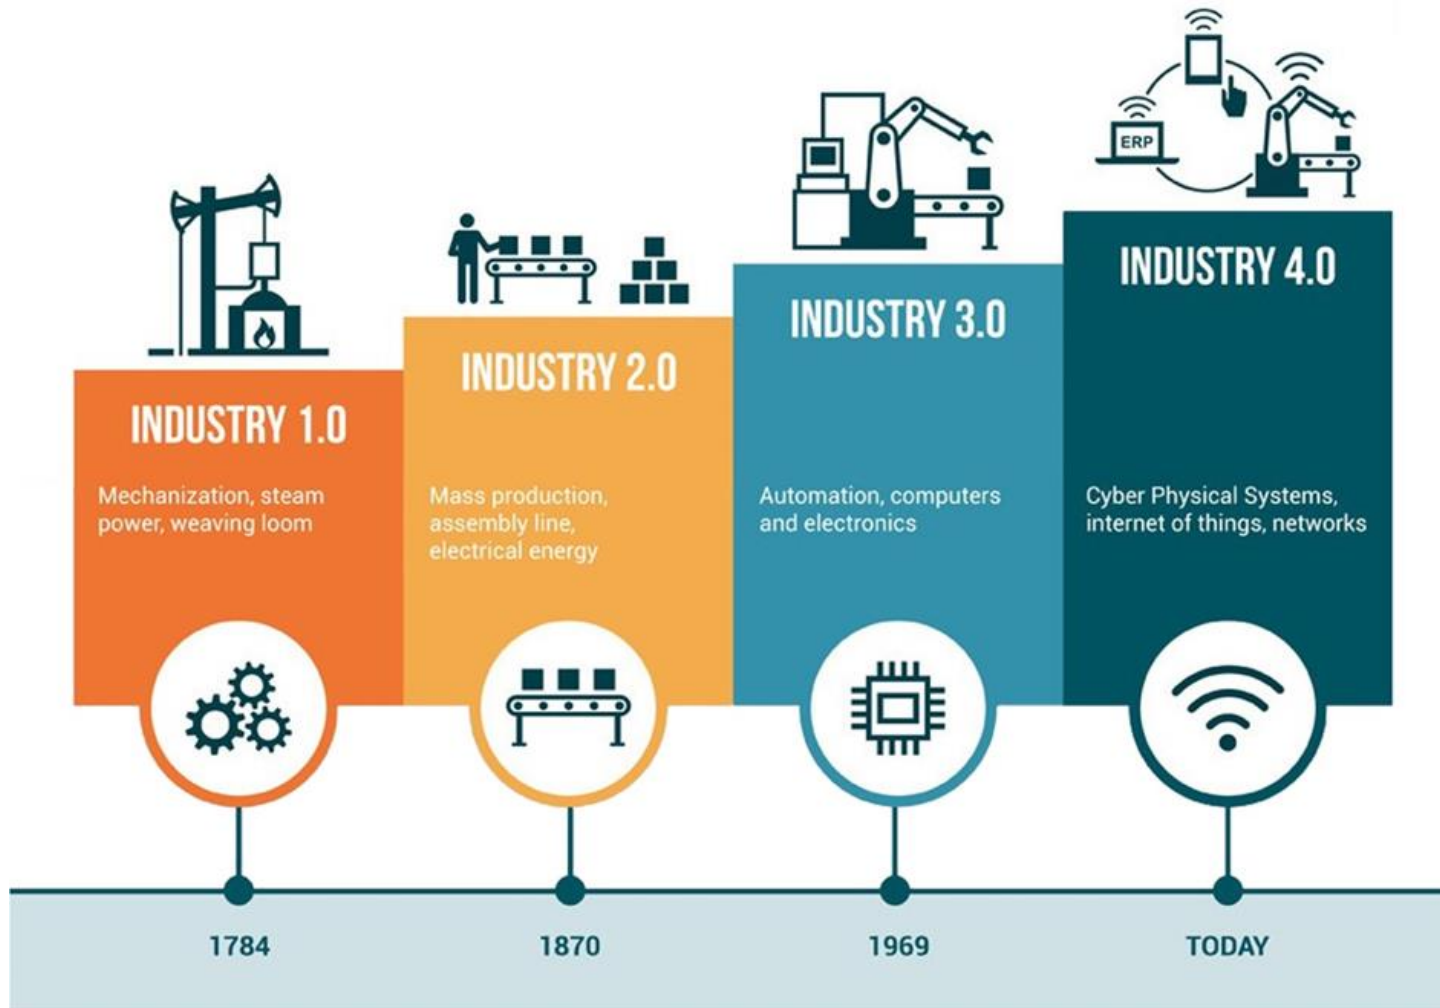

DR. JESUS RODRIGO F. TORRES

President, Technological University of the Philippines

September 20, 2019

The Fourth Industrial Revolution (FIRe) is characterized by the development of new forms of technology.

- Machine to machine communication.
- Preventive maintenance of machineries
- Advanced skills training
- Robotics
- Information transparency

What technology should be developed?

Should we develop technologies for destructive purposes?

Should we alter the conditions of Earth to suit our technological prowess

How far should we proceed with human cloning?

Should we develop better tree-cutting machines?

“The short term and long term impact of our technological inventions and wages should be weighed.”

What should be the objective of technology?

Is technology only for the purpose of making human existence better?

Should we also consider the environment?

“Technology should not be for the benefit of human beings alone.”

Setting limitations to technology development

Let us look into what is valuable to us...

Is it military power?

Economic power?

The survival of this world?

We must tame our primordial instincts to destroy ourselves. Schools, through the teaching of history which contains the triumphs and follies of mankind so that the mistakes of the past may not be repeated.

TUP FOR THE WORLD

2019 ACPORE Convention and International Conference
September 20, 2019

Thank you!
